X-Large	Up to 1,500,000 km ²	\$1,050	
Jumbo	Up to 2,250,000 km ²	\$2,400	

FAQ

Q: Is the device rate the price of the radio?

A: No, the device rate is the Iridium 3-month or 12-month airtime plan. For pricing on the IC-SAT100 / SAT100M radios please contact connect@icomamerica.com.

Q: What is a talkgroup?

A: Talkgroups are an assigned group of users that can talk with each other on an assigned channel on a satellite radio.

Q: What is a talkgroup rate?

A: Talkgroup rates are determined by the size of the coverage area chosen. Free talkgroups are available with every 5 active PTT devices, see your provider for more details.

Q: Do I need more than one talkgroup to talk with multiple divergent locations?

A: No, the total area a talkgroup can be used is determined by Small, Medium, Large, X-large, and Jumbo (each representing a total amount of square kilometers of coverage). Talkgroup coverage can then be split into multiple locations if needed. A Small talkgroup plan can be split into 5 separate locations and Medium to Jumbo into 10 multiple locations.

Below shows a coverage map for a Small talkgroup. “A” shows one location at 100%, “B” shows the coverage split up into 5 separate locations across the world.

A Map: 100,000 Km² Coverage at 100%

B Map: Coverage Split Into 5 Locations

Q: How many satellite radios can I use in a talkgroup?

A: The minimum amount of satellite radios required for operation would be 2 and the maximum would be up to how many the customer requires. There is no specific limit.

Q: How do I adjust talkgroup coverage?

A: After you purchased your plan, your provider will send you login information to access the Iridium PTT Command Center (depending on your agreement with them) with the ability to manage satellite coverage and devices to match your communication needs.
